Re-state the Assignment

Make the LED light-up once every 4 presses.

Hand-drawn or digitally-drawn schematic diagram

Reflections

It took me a while to understand how to use Arduino to make this happen. It is quite different from the code that I'm used to working with so I don't fully understand it yet. I

tried adding a feature where the light would go out after 4 presses but could not make it happen. Overall, I am still trying to learn how to code in this environment.
